Information, Instructions, and Pricing Guide to Cosmetic Procedures

What is **Cosmetic Sclerotherapy**?

The injection of medicine into a vein to destroy the vessel and stop the vein from carrying blood.

Checklist for Procedure:

- Bring a pair of your shortest, loose fitting shorts with you on each of your visits
- Bring compression hose to EVERY visit
- On average, spider veins require 2-5 treatments before resolution, average is 3. The larger the vein, the more treatments required.

Aftercare:

- Leave your hose on the FIRST night, and then wear hose during the day for 2-3 weeks. The longer you wear the hose, the better your results. You may remove your hose to shower.
- Walk for 20-30 minutes one to two times EACH day.
- There will be bruising. THIS IS NORMAL. Your veins will look worse before they look better.
- Occasionally, there is a brown discoloration **after injections**. This is transient and will fade over time. **It can take several months to fade.**
- Occasionally there will be tenderness or bumps/knots in the areas treated. Extra- Strength Tylenol or Motrin will help with the discomfort. **Warm heat will help with the pain 20-30 minutes, daily until less discomfort is gone.**
- HAND VEINS** – remove the ACE wrap before bedtime (**DO NOT sleep with wraps on**)

** Each individual's veins are different, so we can give **no guarantee** that complete resolution of your spider veins can be accomplished. It is unusual to not see significant improvement after the discussed treatment plan.*

What is **Cosmetic Phlebectomy**?

The removal of the vein using a punch biopsy knife, 1 mm circular shape. The holes will close in 48 hours with little to no visible scarring in just a few weeks. This allows for a faster result with less compression hose wearing.

Aftercare:

- Leave compression hose on for the first 48 hours. You can shower after the first 48 hours.
- Continue wearing hose as needed for comfort. Be sure to cover all incision sites, if needed

PRICING – Cosmetic Procedures
